## **ABSTRACT OF THE DISCLOSURE**

Disclosed herein is a wheel balancing device having a plurality of wheel balancing weights attached to a top surface of an elongate tape, and a backing strip removably attached to and 2 protecting an adhesive layer on the bottom surface of the tape. The backing strip is serrated below the grooves separating the individual wheel balancing weights to facilitate separation of the individual weights quickly and easily. Each backing strip serration may be in the shape of a lift tab or finger grip to further ease removal of the backing strip from the adhesive layer on the bottom surface of the tape.
